Education

B.Tech, Computer Science Engineering — Expected 2026
Vellore Institute of Technology (8.34 CGPA) — *Bhopal*

Class XII, CBSE (76%) — 2022
Choithram School — *Indore*

Class X, CBSE (76%) — 2020
Choithram School — *Indore*

Experience

NAS Server Development — Dec 2024 – May 2025
LNJ Corporate solution

- Architected a highly available TrueNAS ecosystem on Proxmox utilizing ZFS RAID and a 3-2-1-1 backup strategy, achieving 99.9% data availability.
- Engineered automated Python workflows leveraging the TrueNAS REST API to provision containerized apps (Nextcloud, n8n), audit NFSv4 permissions, and monitor system health.
- Established secure zero-trust network access and automated offsite replication using Cloudflare Tunnels and Tailscale for 15+ concurrent users.

Projects

Medical AI Suite & Clinical Trial Matcher (Live | GitHub) — 2026
LangGraph, LangChain, Groq, Streamlit, PyPDF, REST APIs

- Engineered an AI-driven healthcare platform using LangGraph and Groq (Llama 3.1) to autonomously match patient profiles against the ClinicalTrials.gov API, analyzing up to **20** actively recruiting trials in under **5 seconds**.
- Developed an automated PDF extraction pipeline utilizing PyPDF and LangChain, successfully structuring **10,000+** character unstructured medical reports into actionable JSON datasets mapping **15+** key biomarkers.
- Deployed a responsive Streamlit dashboard with geographic filtering and plain-English summaries, reducing manual clinical screening time by over **90%** while achieving sub-**3-second** LLM inference speeds.

IoT Remote Access & Private Cloud Controller (GitHub) — 2025
C++, PlatformIO, ESP32, Python, REST APIs, HTTPS, LittleFS, WoL

- Engineered a secure IoT gateway using ESP32 (C++/PlatformIO) and Telegram Bot API to trigger remote Wake-on-LAN (WoL) magic packets, eliminating the need to expose management ports (SSH/IPMI) to the public internet.
- Integrated TrueNAS REST API client over secure HTTPS to execute authenticated ACPI shutdown and reboot actions, and implemented a custom cron-like task scheduler that persists state across reboots using LittleFS flash storage.
- Developed a companion Python network scanning utility to auto-discover active hosts, map MAC/IP address tables, and dynamically sync configurations back to the microcontroller over the local subnet.

GradeWise - AI Powered Grading Tool (GitHub) — 2024-2025
Next.js, React, Tailwind CSS, Genkit, Google Cloud Platform

- Developed a full-stack web application to automate student paper grading using AI, significantly reducing grading time for educators.
- Implemented AI flows for extracting questions, generating feedback, and scoring similarity, leveraging Genkit and Google Cloud Platform for scalability and reliability.
- Designed a user-friendly interface with Next.js and Tailwind CSS, providing a seamless experience for teachers to upload papers, review grades, and provide final feedback.

Technical Skills

Languages & Data Processing: Python (Pandas, NumPy), SQL, Java,

AI & LLM Integrations: LangGraph, LangChain, Genkit, Groq (Llama,Gemma,Kimi e.t.c)

Cloud & Infrastructure: Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, Proxmox, TrueNAS

Databases & Storage: MongoDB (Atlas-AI), Supabase, ZFS, Vector Embeddings

Data Engineering & Tools: REST APIs, CI/CD, Git, Streamlit, Task Scheduling (Cron), Linux/Bash
