Professional Summary

Cloud Infrastructure, DevOps & Site Reliability Engineer specializing in zero-trust enterprise networks, bare-metal hypervisors (Proxmox VE), and AI-driven infrastructure automation. Expert in Kubernetes, Docker, Linux kernel administration, storage systems (ZFS, TrueNAS SCALE), Infrastructure as Code (Terraform), Model Context Protocol (MCP), and autonomous multi-agent pipelines with 99.99% service SLA.

Professional Experience

LNJ Corporate Solutions Indore, India
Cloud Infrastructure & SRE Lead Dec 2025 - Present

- **Enterprise Storage & HA:** Architected a Proxmox VE hypervisor cluster on TrueNAS SCALE with ZFS RAID-Z and 3-2-1-1 automated backup replication, delivering 99.99% data availability across multi-terabyte datasets.
- **Zero-Trust Network Mesh:** Spearheaded an enterprise Zero-Trust access fabric using Tailscale mesh overlays and Cloudflare Tunnels (mTLS), eliminating 100% of public IPMI/SSH exposure across 15+ distributed server nodes.
- **High-Throughput Search Engine:** Deployed an indexed search engine over 350+ GB (700,000+ files), reducing document query and retrieval latency by 85% with zero host CPU performance degradation.
- **AI-Augmented Automation & Telemetry:** Automated asynchronous Python pipelines interfacing with self-hosted LLM APIs and TrueNAS REST daemons to enforce NFSv4/SMB ACLs and monitor container lifecycle health.

Projects

Bare-Metal IoT Gateway | Remote Access & Power Governor (*ESP32 C++, LittleFS, HTTPS*) 2025

- Formulated an embedded gateway on ESP32 microcontrollers executing encrypted Wake-on-LAN (WoL) and ACPI power-state transitions over authenticated HTTPS, securing out-of-band management without WAN exposure.
- Integrated TrueNAS REST API clients with persistent cron scheduling on non-volatile LittleFS flash memory, guaranteeing 100% deterministic task recovery across 50+ simulated power outages.

PeerStor | Fault-Tolerant Distributed Storage Cluster (*Rust, Tokio, Raft, gRPC*) 2025 - 2026

- Architected an asynchronous peer-to-peer storage engine across 10+ virtualized nodes, implementing Raft-backed leader election to guarantee deterministic data recovery from node failover in <300ms.
- Built concurrent chunking and stream replication pipelines in Rust, achieving sub-20ms synchronization latency across clustered nodes with zero data corruption under simulated partition failures.

Automated Edge Platform | Medical AI Decision Engine (*Cloudflare Workers, Rust/WASM, LangGraph*) 2026

- Deployed serverless edge infrastructure using Cloudflare Workers and WebAssembly (WASM) with sub-50ms Time-to-Interactive (TTI) and 100/100 Lighthouse score, eliminating cloud compute idle costs.
- Automated clinical decision workflows parsing 10,000+ unstructured medical biomarker records via LangGraph pipelines with sub-3-second execution speeds.

Technical Skills

Cloud & Virtualization: Amazon Web Services (AWS: EC2, S3, IAM, VPC), Google Cloud Platform (GCP), Proxmox VE, TrueNAS SCALE, ZFS Storage, Docker Containerization, Kubernetes.

DevOps & Automation: Infrastructure as Code (Terraform), CI/CD (GitHub Actions), Prometheus, Grafana, Linux Kernel Tuning, Bash Scripting, Python (FastAPI, Asyncio), Rust.

AI-Driven Infrastructure & SRE: Model Context Protocol (MCP), Multi-Agent AI Orchestration, Self-Hosted LLMs (Groq, Ollama), LangGraph, Autonomous CI/CD Verification Loops.

Networking & Security: Zero-Trust Architecture (mTLS, Tailscale WireGuard, Cloudflare Tunnels), Reverse Proxies (Nginx, Envoy), DNS Routing, VLAN Isolation, REST APIs, gRPC.

Certifications & Accreditations

Cloud & Systems: Oracle Cloud (OCI) Foundations Associate | AWS Certified Solutions Architect – Associate (In Prep)
Infrastructure as Code & AI: HashiCorp Certified: Terraform Associate (003) (In Prep) | DeepLearning.AI – LangChain Development

Education

Vellore Institute of Technology (VIT) Bhopal, India
Bachelor of Technology in Computer Science and Engineering 2022 - 2026
